Ludwig

MERIDIANI VOL. 2

Technical sheet, for professional use

L'elemento esagonale Ludwig rappresenta una rilettura contemporanea e in perfetto stile Meridiani di un oggetto del passato come la madia. Sono colonne dal notevole volume interno, che possono essere accostate per separare la zona giorno da quella pranzo, o utilizzate singolarmente come contenitori dal forte carattere architettonico. Facendo ricorso alle svariate finiture di Ludwig è possibile ricavare un oggetto rigoroso e monocromatico, nella versione Diamond in specchio bisellato, un arredo scenografico.

The hexagonal unit Ludwig is Meridiani's contemporary reinterpretation of the cabinet. These columns are characterized by a wide storage capacity and can be used independently or even paired in order to shape the rooms. Ludwig's wide range of finishes may result in a rigorous and monochromatic object as much as in an exuberant piece of interior design, especially with the Diamond bevelled mirror finish.
